Sports Suspension

Technical Description

The AC Schnitzer Sports Suspension consists of special springs and dampers that have been specially set up on the North Loop of the Nürburgring. Depending on model, lowering of up to 30 mm is achieved by a combination of the required residual spring travel, shortened dampers and newly developed special springs. The multistage response behaviour of the dampers ensures permanent driving pleasure in every situation. Thanks to the design, the dampers adapt to the different vehicle speeds and road conditions. This causes a variability in the bound and rebound levels of the damper and thus ensures an ideal compromise between everyday comfort and track performance.

Benefits for the Customer

More agility

-> Improved driving stability and higher cornering speeds.

More safety

-> Higher safety reserves on sudden load changes and avoidance manoeuvres.

More driving pleasure

-> A perfect compromise between suitability for everyday use and spirited driving pleasure.

Sporting appearance, especially when combined with larger tyres.

beyond the standard.
