

# AC Schnitzer ACS7

**AC<sup>®</sup>**  
**SCHNITZER**  
*beyond the standard.*

## A pre-emptive strike against mediocrity.

With the appearance of the 7-series, BMW has opened a new chapter in automotive design. As in many innovative concepts, the first design was way ahead of its time. The new design polarised opinion. Views amongst both the trade and the public were widely divided.

With the revised model, the avantgarde design was given a more pleasing form in the details. But even under the modest works designation E65 and E66, this top model sets new standards. With an avantgarde design, a pioneering driving concept and - as usual from BMW - inspiring engineering.

To improve this apparently perfect car was the right challenge for the experienced, innovation-loving designers and engineers at AC Schnitzer. They have developed an extensive special accessories range which gives the luxury saloon - both the first and second generation - the touch of additional exclusivity and individuality which is decisive for the sporting enthusiastic driver.

*The fine difference: Subtle black or brilliant chrome - the AC Schnitzer flipper on the air intakes in front of the rear wheels set functional and aesthetic accents.*

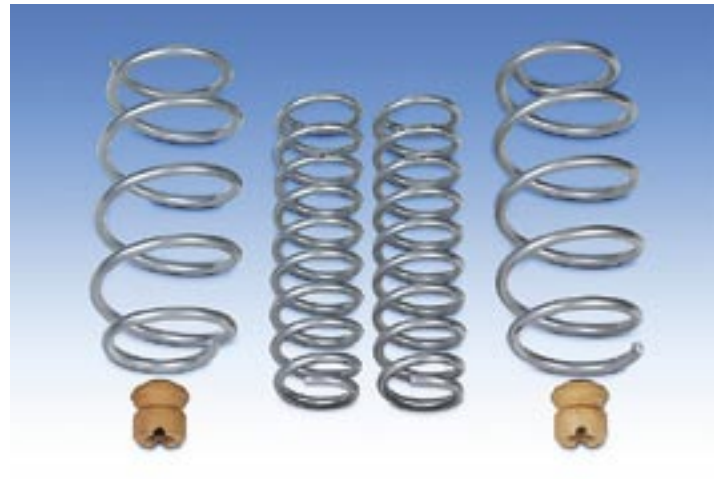

## Entdecken wir die dynamischen Seiten exklusiver Eleganz.

A significant innovation is the variable design of the aerodynamic components from AC Schnitzer. Depending on the colour, you can choose between subtle black and the elegant Chromeline Design. In the Chromeline variant, the front spoiler, side skirts and rear skirt insert are accentuated with chromed trim. The aerodynamics are supplemented by a single-piece rear spoiler starting

at the C-pillar, which emphasises the striking sporting lines. Last but not least, sports mirror covers and a rear roof spoiler form part of the range.

As well as visual improvements, the AC Schnitzer aerodynamic conversion also brings functional optimisation. For example, the downforce values - already excellent as standard - are further improved.

*Perfect Harmony of Sporting Elegance:*  
For both the rear and the front of the ACS7 – the AC Schnitzer aerodynamic components strikingly enhance the body design of the standard vehicle in all details. As with all models, the AC Schnitzer suspension spring kit for the 7-series was matched to the vehicle during extended test runs, including on the Nürburgring.

**SCHNITZER**  
*beyond the standard.*

## Wheel design is a matter of taste.

*AC Schnitzer Type II as alloy wheels (top row left) in 19" and 22";  
AC Schnitzer Type III racing rims (top row right) in 19" and 20";  
AC Schnitzer alloys Type IV (bottom row left) and Type IV BiColor (to its right) in 19".*

*AC Schnitzer racing rims Type IV (bottom row right) in 19" to 22".  
AC Schnitzer racing rims Type IV „Magic Black“ (bottom row, far right) in 20" and 22".*

Everyone has his own ideas about taste. So the wide range of individual aesthetic preferences is reflected in the versatility of the AC Schnitzer wheel range.

**The Classic:** The AC Schnitzer Type II alloy in the legendary 5-spoke design - still only available from AC Schnitzer in the original - for the 7-series in 19" and 22".

**The Innovative:** The variable concept of the AC Schnitzer Type III with open or closed spokes is available for the 7-series

as a multipiece racing rim in 19" and 20".

**The Avantgarde:** As a new interpretation of the 5-spoke design, the AC Schnitzer Type IV alloy and racing rims have already set new standards in all vehicle classes. The striking rim silhouette, with its variable chrome elements or - in the BiColor Finish - with polished and matt black components, offers totally different visual styles. The AC Schnitzer Type IV wheels are available for the luxury saloon in sizes 19" to 22".

*The AC Schnitzer Aluminium Cover in the style of the Type IV wheel.*

*The AC Schnitzer suspension kit is perfectly set up for the saloon.*

## **A unique driving sensation for the sensitive.**

Experience exclusivity close at hand. Selected design elements from AC Schnitzer set individual highlights in the interior of the 7-series saloon.

E.g. the anodized AC Schnitzer aluminium cover provides both tactile and visual enhancement

for the BMW "i-Drive System". Or refine the footwell with the aluminium pedal set and foot rest, complemented by high quality AC Schnitzer velours mats. Or choose a more active driving feeling with the AC Schnitzer four-spoke sports airbag steering wheel.

*Fine, fine: The AC Schnitzer aluminium cover for the BMW i-Drive system, the aluminium pedal set and the velours mats with logo – all contribute the final touches to the refined ambience.*
