# Evolution: AC3 “Evo” Lightweight Forged Wheels with central locking optics

**The highlight of the AC Schnitzer rim technology and the latest development stage for the BMW M5 are the AC3 “Evo” Lightweight Forged Wheels with central locking optics.**

FEM analysis AC3 “Evo” Lightweight Forged Wheels

Even though the new Lightweight Forged Wheels in 21 inch clearly belong to the AC3 design family, their appearance is particularly technical due to the central locking nut and the fact that the wheel bolts are no longer visible. They “disappear” under a special aluminium cover that is screwed together with the additional central lock. In addition to their sporty appearance both together also serve as anti-theft devices, which is why a special key is included in the scope of delivery.

The central design element of the AC3 “Evo” Lightweight Forged Wheels is not only in a figurative sense the visible central locking nut with aluminium cover. This unit makes a hub cap superfluous for the first time in the “rim history” of AC Schnitzer. The filigree yet solid spoke matrix with its five triangular struts of the AC3 Lightweight Forged Wheels has been further weight-optimised for the new 21-inch version and for the first time also in the visible area of the rims. The side walls of the rim spokes have recesses which minimize the wall thickness of the spokes. However, the “art of omitting” has not only led to a weight reduction in the AC3 “Evo” Lightweight Forged Wheels, but also to an even sportier appearance.

**In the size 10J x 21” offset 22 the AC3 “Evo” rims are equipped with tyres in the dimension 275/30 R21 on the front and 285/30 R21 on the rear axle of the BMW M5.**
