

AC Schnitzer ACS3

AC[®]
SCHNITZER
beyond the standard.

The sporting side of life is waiting to be discovered.

Like its big brother the X5, this „Sports Activity Vehicle“ or SAV is designed above all for drivers who place particular importance on uncompromising progress and a flexible concept of space. In typical BMW manner, the X3 combines these properties with active driving pleasure and technical perfection.

As there are modern drivers whose sporting ambitions and demand for exclusivity exceed the norm, our engineers have also developed a complete

range of special accessories for the X3. All components appeal to both the technically aware and the style-conscious SAV driver.

The first visual accents are set by the aerodynamic range specially developed for the X3. With front skirt, which can be highlighted with the Chromeline Set, rear roof spoiler and rear skirt, the body looks more harmonious, striking and dynamic all round.

The AC Schnitzer front skirt (bottom) continues the styling lines of the X3 and gives the vehicle a dynamic face thanks to its large air intakes.

Power isn't just about horses.

A power upgrade - as its name suggests - is all about more power. The bare figures must be convincing. With a power of 237 HP/174 kW for the 3.0 l diesel engine, it isn't difficult to convince even data-fetishists.

What it really means to have 237 HP and a torque of 460 Nm working at the four wheels of the X3 isn't easy to understand on paper, and is only really experienced out on the open ground.

And however good the picture, it can only give a hint of the convincing live experience of the sonorous note of the AC Schnitzer sports rear silencer of V2A special steel with chromed tailpipe in Racing Design. So it's best to try it for yourself.

Small, black and full of electronics: The AC Schnitzer performance upgrade for the BMW X3 3.0d (left picture) harmonises perfectly with the AC Schnitzer sports rear silencer of V2A with chromed tailpipes in Racing Design.

SCHNITZER
beyond the standard.

Perfectly equipped for everything.

Often copied, never equalled – the exclusive variants of the five-spoke design from AC Schnitzer: Type II alloys (left), Type III racing rim (large picture bottom), the AC Schnitzer Type IV racing rim (centre) and the Type IV alloys (right), both in innovative pentagon design with optional chrome inlays.

What's the use of the best performance, in sport or in automotive terms, if it's not applied properly. The transfer of power to the road and open ground offers the greatest potential for optimisation. A potential that we at AC Schnitzer exploit particularly well in the ACX3. With its specially designed sports suspension, lowering by around 20 - 30 mm and special dampers, driving comfort is even better than the standard model and

the power is implemented more effectively in every situation.

When it comes to wheel-tyre combinations, SAV drivers have a wide choice. Three design variants are available as alloy and racing rims in sizes from 8.5 J x 18" and 8.5 J x 19", via 10.0 J x 20" up to 9.0 J x 21". The AC Schnitzer Type II wheel as a classic five-spoke design, the Type III alloys and racing rims with their flexible design elements, and the Type IV alloy and racing rims available as an innovative five-spoke with striking pentagon design and optional chrome elements.

Exclusivity in new ways.

As well as the technology transfer from motorsport, a design transfer gives a particularly exclusive ambience in the interior.

The AC Schnitzer sports airbag steering wheel is finished in high quality leather or carbon applications. The matching carbon centre console and door handles in silver give a special

atmosphere all round. As well as ultralight carbon, wherever the driver has contact with his vehicle, equally lightweight aluminium is used with a fine brushed finish:

Footrests and pedal set, gear knob and handbrake handle give that exclusive touch close at hand.

Sporting feeling in the AC Schnitzer ACS3 with carbon interior trim in silver, airbag sports steering wheel with carbon applications and numerous accessories of brushed aluminium (left picture). With the AC Schnitzer sports suspension, the driving dynamics of the BMW X3 move into the sporting dimension.
